

# Deetail™ PATTI-GOOP™ INSTRUCTIONS

Deetail™ PATTI-GOOP™ is a new product, that is a replacement for GOOP FX made in the 1990's.

Deetail™ PATTI-GOOP™ is a very thick formula that stays exactly where you put it. Apply Deetail™ PATTI-GOOP™ to the mold first to add detail, accent colors, or contrasting colors, or designs to all your creepy, ghoully, or pretty plastic toys. Then pour regular PATTI-GOOP™ on top to fill up the mold and bake as usual. You can bake all your colors at once, without any colors running together.

You can apply Deetail™ PATTI-GOOP™ in various ways, such as, using the detail tip of the bottle. Or you can squeeze out a dot on a non-porous work surface, and touch the dot with a toothpick, and then apply to your mold. You can also use a small paintbrush. Very small amounts can be used.

Deetail™ PATTI-GOOP™ can be baked in the original Thingmaker oven, your home oven, or other types of ovens used with regular Plasti-goop. Bake at 325-350 degrees, for 3-10 minutes, or until goop looks uniform in color in the mold. Cool mold in a cooling tray, or a shallow glass dish with some water in the bottom. Try not to get water on top of the mold.

Are you having trouble getting the thick parts of the mold to bake thoroughly without burning the thin parts? When I bake goop, I use an electric burner hot plate, with a skillet on it. Place your mold on the skillet when you are ready to bake it, then simply put a metal or glass cooking lid over the mold. If you use a glass lid, you will have the advantage of being able to see the plastic toy while baking. Be sure and use a pot holder when handling the lid.

Deetail™ PATTI-GOOP™ works with any brand of goop.

Your Deetail™ PATTI-GOOP™ will be easier to dispense from the bottle, if you store them with the tip down, or laying on it's side with the cap on. You could put them in a cup, for example, with the tip down.

For the larger 1 fluid oz. bottles, remove the inner seal from the cap before dispensing.

**NITE-GLO CHARGING INSTRUCTIONS:** For the best glow effect, hold your baked toys under a light source, such as a common light bulb, or the spiral energy efficient bulbs for a few minutes, and the phosphorescent substance absorbs the light, and then will glow-in-the-dark. This process can be repeated endlessly. The glow substance does not wear out.
